ABOUT US

Our Ready-To-Finish Outdoor Kitchen Cabinets are an easy, fast, and efficient alternative to building with concrete blocks.

The modular system includes cabinets ranging in size from 6" wide to 72" wide, in 6" increments. Each cabinet is engineered to ship knocked-down, so it's easy to get to the backyard and assembles faster than any other system on the market.

Our Ready-To-Finish Outdoor Kitchen Cabinets are also universal in nature, meaning the system truly is a custom kitchen solution - Any Design, Any Configuration, Any Veneer, Any Countertop, and Any Appliance.

Fast. Efficient. Profitable.

• **HIGHER PROFITS.** We can talk all day long about the unique features and benefits of our RTF Cabinet System but if it doesn't save you money, what good is it, really? Well you won't have to worry about that with our system.

• **SAVE YOUR BACK.** Compared to concrete block construction, our system is as light as a feather. The RTF Kitchen System then weighs about 50 lbs. per linear ft. Concrete block, mortar & rebar weighs 375 lbs. per linear ft.

• **QUALITY CONSTRUCTION.** Galvanized square tubing, no studs, and 1/2" Hardie backerboard make our cabinets extremely strong and able to withstand any countertop material you choose.

• **VERSATILE DESIGN.** With so many standard cabinet sizes to choose from, you can create just about any size and any shape outdoor kitchen needed. We can even customize the cabinet sizes for special circumstances.

• **UNIVERSAL APPLIANCES.** Sometimes customers can be very selective and they've got their heart set on a certain grill - that's fine by us. Our system is designed to accept any appliance and any storage accessory brand out there.

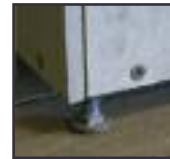

When compared to building outdoor kitchens with concrete block, our system will save you about 1/3 the cost, which can end up being thousands of dollars per job that will drop right to your bottom line!

• **FAST & EFFICIENT.** Time is definitely money. In addition to the labor savings of the RTF Kitchen System, calculate your daily overhead by the number of days you'll save. You just gave yourself a raise!

• **EASY TO ASSEMBLE.** A screw gun, level, and a 4-inch grinder is all it takes to assemble and configure our cabinets. That means there's no mess to clean up, no lawn to repair, and no fence to put back up.

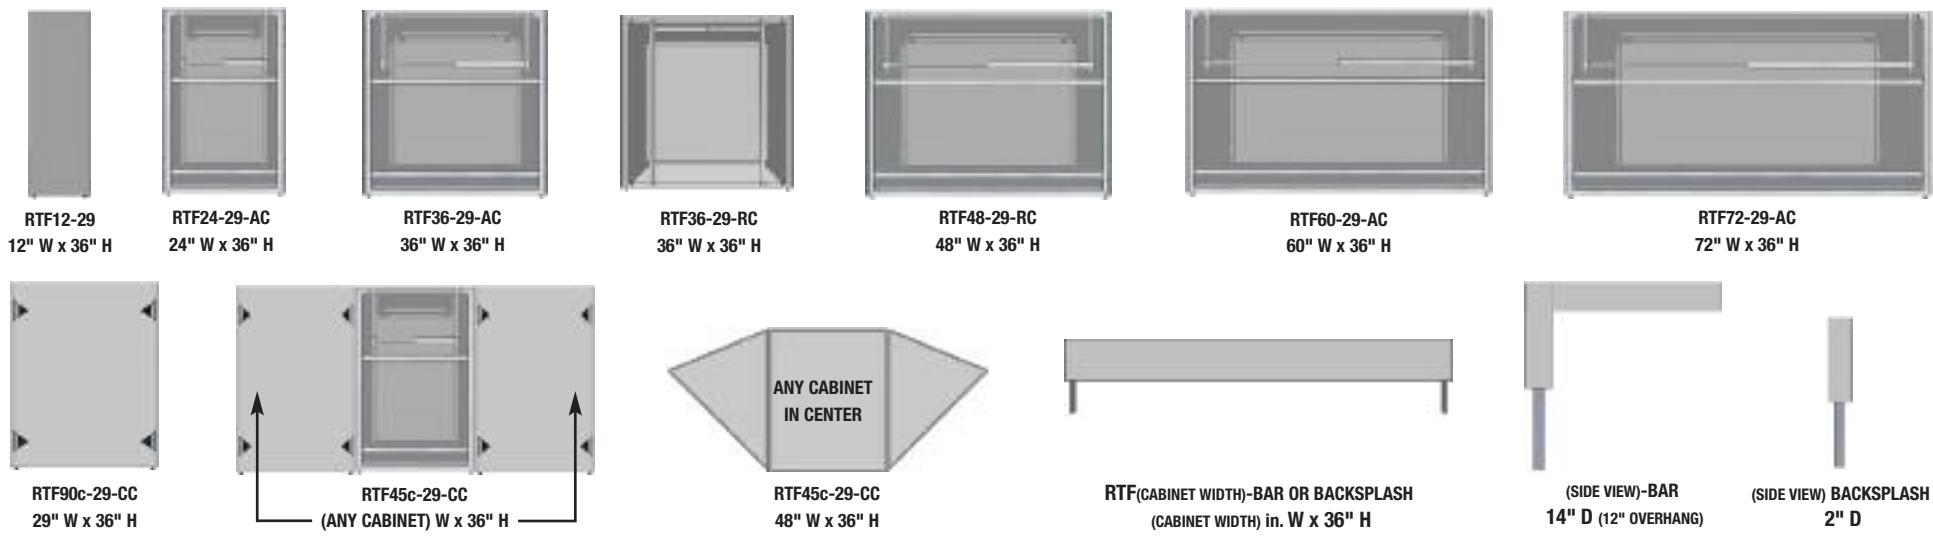

• **LITTLE THINGS THAT MAKE LIFE EASIER.** We understand what makes your job easier and we've added some little touches to make that happen. Leveling feet, supported floor, and utility chases just to name a few.

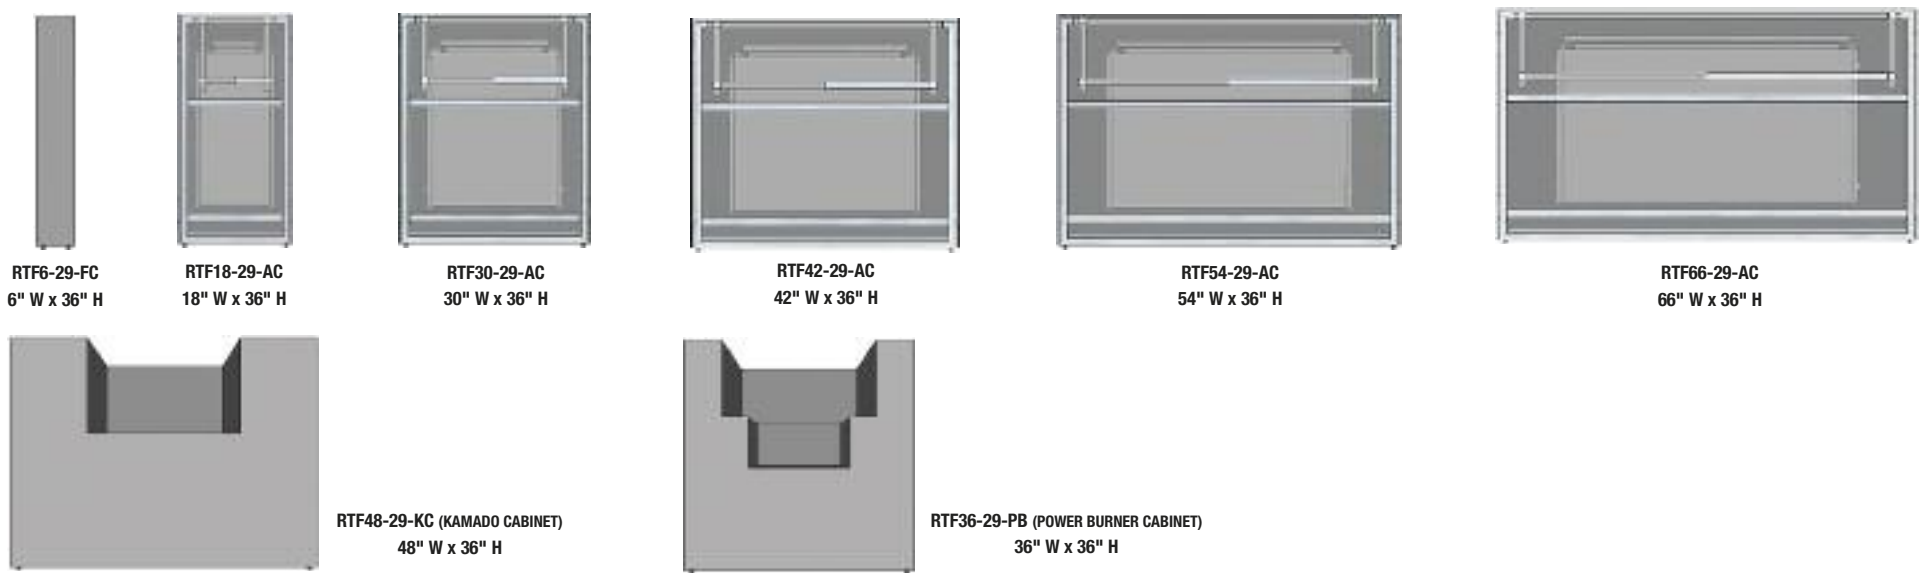

Fast. Efficient. Profitable.

STEP 1 - APPLIANCE CUTOUTS				
STEP 2 - CABINET ASSEMBLY				
STEP 3 - CONNECTING THE CABINET	<p>MINIMAL TOOLS REQUIRED: • SCREW GUN • LEVEL • SAWZALL OR GINDER • CRESCENT WRENCH</p> <p>DETAILED INSTRUCTIONS: • ENGLISH & SPANISH VERSIONS • STEP-BY-STEP WITH DIAGRAMS</p>			

Other Components Available.

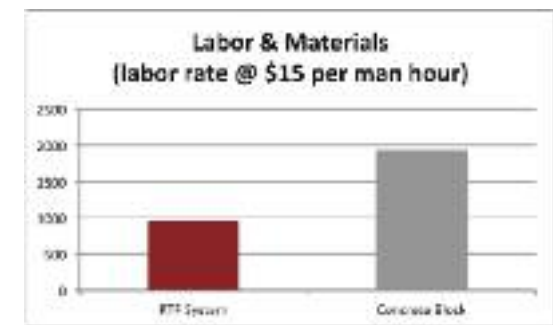

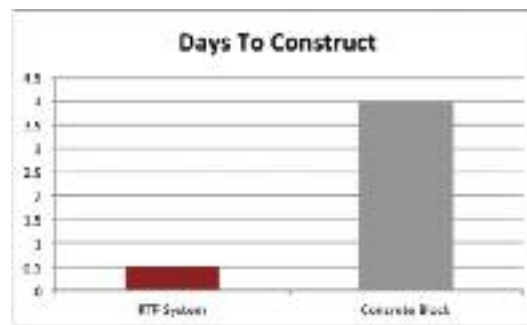

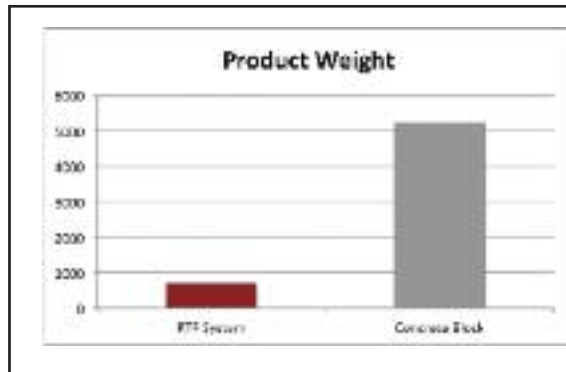

How it Stacks Up.

The RTF Outdoor Kitchen SystemTM is the fastest, most efficient, and most profitable construction method on the market for building outdoor kitchens. In comparing against CMU block construction, the key contributing factors include the product weight, materials cost, time to construct, and the labor cost.

The below rendering represents a comparison outdoor kitchen, which is 14 total feet long (outside dimension). The charts compare the three key factors of RTF Outdoor Kitchen SystemTM against building the structure with CMU block.

With each construction method, the comparison takes the project to the point in which the structure is ready for veneer materials, countertops, and appliances. As illustrated, the RTF Outdoor Kitchen SystemTM adds bottom line profits to your projects and has many additional features and benefits that make it the number one system on the market.
