ABOUT US

The King Klinker story is one of freedom of enterprise and a strong Polish heart determined not just to survive, but to be the best. The founders established its roots as a ceramic and glazing company named, Klinkier Przysucha, during a time when the Soviets had control of Poland post WWII. Then in 1987, after the fall of the Soviet Iron Curtain as President Ronald Reagan challenged Soviet leader Mikhail Gorbachev to “tear down this wall”, Klinkier Przysucha was positioned for private sale. As a free country, it took many years for Poland to sell off all the state-owned companies. However, in 2004, private investors purchased the struggling factory and made plans to form a massive thin brick plant.

In 2013, King Klinker built the most sophisticated thin brick plant in the world with Siemens controls

and the latest German machinery. Polish engineers also added their own twist to the high level of sophistication by creating trade secret machines for making some of the best collections of thin brick in the world.

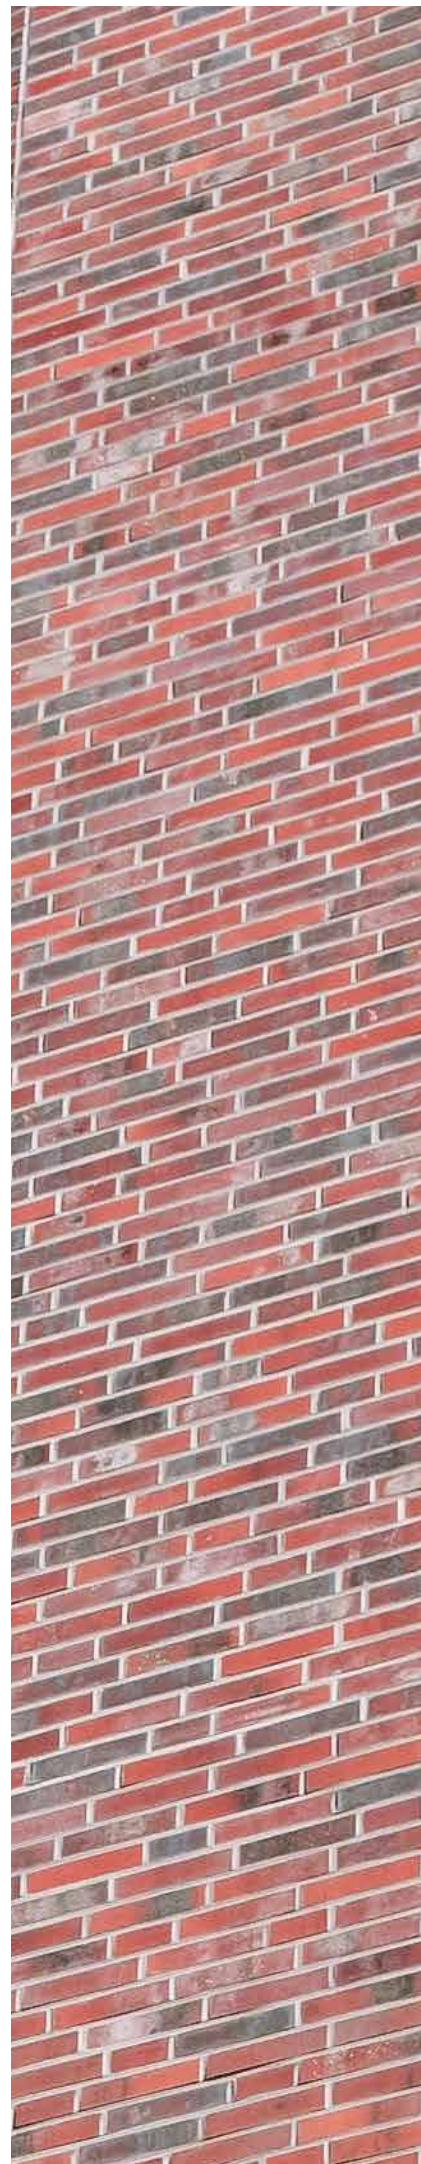

Today King Klinker is growing fast and adapting to markets around the globe. With high quality clay and the best manufacturing methods, King Klinker thin brick far exceeds some of the most stringent tests such as the PCI tolerance and pullout tests in the USA. King Klinker has been bold in creating new sizes for the American market such as modular, norman and American imperial. Furthermore, King Klinker has implemented a comprehensive stocking program in Poland as well as in Norfolk, VA and Houston, TX to meet the immediate needs of the Americas.

THIN BRICKS

King Klinker of the Americas partners with thin brick distributors in the United States and Canada to provide thin brick for stunning architectural design that leaves a lasting legacy of distinction, caliber and craftsmanship. King Klinker thin brick astounds the eye with it's unique colors, textures and sizes including the long ultra premium length. King Klinker delivers on results achieving and exceeding all testing standards. King Klinker thin brick will amaze with it's timeless elegance for generations.

WHAT MAKES US UNIQUE?

In 2013, King Klinker built the most sophisticated thin brick plant in the world with Siemens controls and the latest German machinery. Polish engineers also added their own twist to the high level of sophistication by creating trade secret machines for making some of the best collections of thin brick in the world.

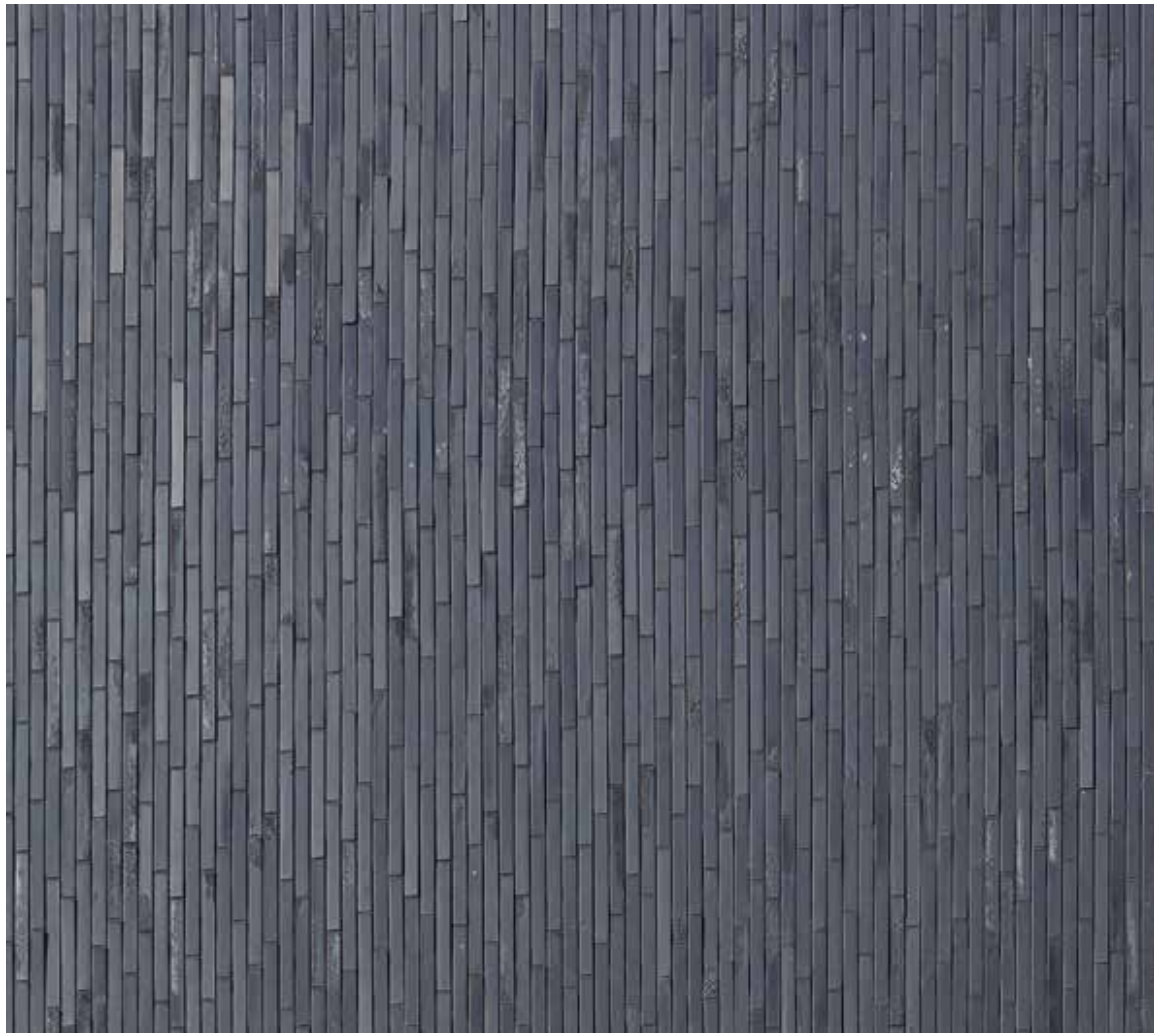

- ◆ Brick Manufactured for Precast
- ◆ 20" Thin Brick
- ◆ In Line Glazing
- ◆ Stock of Each Color
- ◆ US Express Ship - Have your order within a week
- ◆ Amazing Color and Texture Options
- ◆ Chameleon Blending Tools and BIM Support

ULTRA PREMIUM COLLECTION

The Ultra Premium collection is vertically extruded featuring quasi glazing in some colors and manufactured in Modular, Norman, King, Meridian, European Imperial and American Imperial sizes.

- ◆

PCI Freeze/Thaw Pullout

King Klinker thin brick exceeded the freeze/thaw tests by at least 27%. Freeze/thaw cycles have little effect on King Klinker thin brick. King Klinker passed for all clay body colors.
- ◆

Water Absorption

King Klinker thin brick has a water absorption of ~3%, just enough water absorption for perfect bonding yet not too much for maximum integrity of the clay body.
- ◆

Efflorescence

King Klinker thin brick has no chalky white efflorescence usually caused by impurities in the clay.
- ◆

Warpage

All King Klinker thin brick sizes meets the warpage standard of TBX.

- ◆

Size

King Klinker thin brick meet TBX tolerance for all sizes. Modular and Norman meet PCI dimensional standards for precast projects.
- ◆

Chemical Resistance

King Klinker thin brick is not affected by acidic cleaning agents.
- ◆

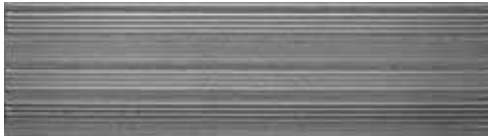

Brick Back Structure

King Klinker thin brick can be made with a key-backed structure or a ribbed-backed structure.

EXCEEDS PCI STANDARDS FOR PRECAST

King Klinker thin brick is manufactured to PCI compliance. Please contact us for precast information.

INSTALLATION METHODS

EMBEDDING INTO PRECAST CONCRETE

Installing waxed thin bricks face down into a form liner made to a specific pattern in a casting bed. This method is used in Tilt-up Concrete construction as well as Precast Plants. This affordable but high-end method provides a fantastic building envelope that will last for centuries.

www.advancedformliners.com

TRADITIONAL METHOD

A metal lath is used and a scratch coat of thinset mortar is applied over the top of the metal lath then dried, then a notch trowel is used to apply a second layer of thin set adhesive and the thin bricks are applied directly on top and pressed into the thinset. After set, the grout can be applied between the thin bricks.

CEMENT BOARD PANEL SYSTEMS

Cement board thin bricked panels is a cement board with thin bricks adhered to the board. The panels give customers the ability to design without the expense of a foundation or the expense of labor associated with brick masonry.

METAL PANEL SYSTEMS

Metal panel thin brick systems give the flexibility in design with eliminating the cost of the foundation and a light building envelope. This system is usually installed with drainage layers as water can penetrate through the panel and weeps out the bottom.

EXTERIOR COMPOSITE BRICK LATH

Speedymason brand is the only system of this category and it allows a full set of thinset mortar between the panel and the thin brick but also includes guides to show where to place the thin brick for easy installation, this system has the integrity of the tradition method but saves time and labor costs.

www.speedymason.com

PEEL-N-STICK INTERIOR SYSTEM

This method is for interior only, it is a patented composite panel made only by Speedymason that can attach directly over drywall, or almost any sheathing. The panel is made with an adhesive layer, peel off the release liner, stick the brick and grout after. This is the fastest and easiest method of installation.
